Appendix Table 8 - Overall Labor Force Participation Rates From the Baseline REI Projection and Overall Rates for Selected Counties Impacted by Tesla.....	120
Appendix Table 9 - Projected Population Age 5 to 19 From Baseline REI Projection for All Counties and Projected Total Population Age 5 to 19 for Selected Counties Impacted By Tesla. ....	122

## Introduction to the 2015 Population Projections

A draft version of the population projections was developed over the summer and circulated to local governments on August 31 for their comments. The summary table of those projections and the narrative about them (with revisions for the projections and to be part of this document) begin on Page 16. Since then there have been minor revisions to the projections. Following this introduction and the discussion of the initial draft, there is a discussion of the change from the 2014 to 2015 projections for Carson City, Lyon, and Washoe Counties, the detailed population tables and detailed tables in the appendices.

The Regional Economics Models, Inc. (REMI) model was used for these projections. The model that was used provides information for all 17 counties by 23 major economic sectors. It looks at the dynamic economic and demographic relationships between the 17 counties and the United States as a total. The 20 year projections are produced annually and change as more historical data becomes available or is revised.

The supplemental tables in the appendices are from the REMI model including projections for the population from the age of 5 to 19. These tables are provided to aid local governments and economic development officials. Results are reported for a baseline forecast, that is, without including Tesla, and for the five counties likely to see the greatest impact information is presented to show what the additional impact of Tesla may be on those counties.

These tables should not be considered definitive estimates or projections. For instance, the Department of Employment Training and Rehabilitation produces projections and this office also produces the Age, Sex, Race, and Hispanic Origin (ASRHO) Estimates and Projections.

### Nevada's Recent Economic and Demographic History:

The following four tables explore Nevada's recent history. The first table compares Nevada's employment since its peak in 2007 through June 2015 to the country as a whole as well as the states immediately bordering Nevada. Since the bottom of jobs losses, Nevada has regained jobs at a faster rate than the surrounding states with the exception of Utah. That being said, in looking at the monthly current employment data, the state has yet to regain the total number of jobs that were lost during the downturn.

State	Nevada	Arizona	California	Idaho	Oregon	Utah	US Total
<b>Peak Date</b>	<b>May-07</b>	<b>Oct-07</b>	<b>Jul-07</b>	<b>Jun-07</b>	<b>Dec-07</b>	<b>Dec-07</b>	<b>Jan-08</b>
<b>Peak Employment</b>	1,297,500	2,686,300	15,454,300	657,500	1,737,800	1,265,200	138,365,000
<b>Bottom Employment Date</b>	Sep-10	Sep-10	Feb-10	Jan-10	Feb-10	Feb-10	Feb-10
<b>Bottom Employment</b>	1,111,200	2,372,800	14,121,300	598,500	1,590,300	1,173,000	129,649,000
<b>Bottom Less Peak</b>	-186,300	-313,500	-1,333,000	-59,000	-147,500	-92,200	-8,716,000
<b>Years from Peak to Bottom</b>	3.3	2.9	2.6	2.6	2.2	2.2	2.1
<b>Percent Loss</b>	-14.4%	-11.7%	-8.6%	-9.0%	-8.5%	-7.3%	-6.3%
<b>Employment as of June 2015</b>	1,257,100	2,611,600	16,068,400	672,200	1,771,500	1,381,200	141,870,000
<b>Jobs Gained - June 2015 less Bottom</b>	145,900	238,800	1,947,100	73,700	181,200	208,200	12,221,000
<b>Percent of Lost Jobs Recovered</b>	78.3%	76.2%	146.1%	124.9%	122.8%	225.8%	140.2%
<b>Years from Bottom To June 2015</b>	4.8	4.8	5.4	5.5	5.4	5.4	5.4

**Table 1. Comparison of Nevada Job Changes to Surrounding States and United States Total From Peak Employment to June 2015 For Total Non-Farm Employment**

State	Nevada	Arizona	California	Idaho	Oregon	Utah	US Total
Annual Percent Growth From Bottom	2.6%	2.0%	2.4%	2.2%	2.0%	3.1%	1.7%

**Source: US Bureau of Labor Statistics: Current Employment Series - Seasonally Adjusted**

Another way to look at the local economy is by calculating a location quotient. A location quotient looks at a local economy in comparison to a larger regional economy or the national economy. For example, if manufacturing were to make up 10% of the national economy and 12% of a state's economy, the location quotient would be 1.2 (12%/10%). A location quotient greater than 1.0 is considered to be an export industry and 1.0 or less is considered to be an economic sector primarily serving the local economy.

**Table 2. Nevada Location Quotients for Selected Years for Nevada Using North American Industrial Classification System Categories**

North American Industrial Classification Category	2001-1st Year of NAICS	2006-Housing Peak	2007- Peak Employment	2010 -Bottom Employment	2014- Most Recent Available Data	Difference - 2014 Less 2001
Agriculture, forestry, fishing and hunting	0.22	0.20	0.20	0.21	0.21	-0.01
Mining, quarrying, and oil and gas extraction	2.14	1.87	1.84	2.08	1.87	-0.27
Utilities	0.72	0.92	0.83	0.87	0.77	0.05
Construction	1.60	1.88	1.78	1.20	1.13	-0.47

Information	0.62	0.50	0.53	0.51	0.55	-0.07
Finance and insurance	0.72	0.65	0.63	0.62	0.61	-0.11
Real estate and rental and leasing	1.22	1.24	1.28	1.25	1.27	0.05
Arts, entertainment, and recreation	1.80	1.58	1.58	1.47	1.46	-0.34
Accommodation and food services	3.25	2.77	2.73	2.83	2.69	-0.56
Other services, except public administration	0.66	0.65	0.66	0.69	0.77	0.11
Unclassified	0.22	0.30	0.49	0.50	0.28	0.06

**Source: Bureau of Labor Statistics Location Quotient Calculator**

Several industrial sectors have a 2014 location quotient higher than one: mining; construction; management of companies and enterprises; administrative and waste services; transportation and warehousing; real estate and rental and leasing; arts, entertainment, and recreation; and accommodation and food services. The biggest gain where a sector moved into being considered an export sector was the management of companies and enterprises. Mining's location quotient has gone down slightly since 2001. Even though mining's share of employment increased from 1.05% in 2001 to 1.37% in 2014, it also increased nationally from 0.49% to 0.73%, which reduced Nevada's relative advantage in the sector. It should be noted that the mining category captures a number of activities including oil and gas production and support services. The location quotient in Nevada for mining, except oil and gas, was 4.87 in 2001 and 6.78 in 2014 before the drop in mineral prices. The location quotient for support services for mining was 0.36 in 2001 and 0.41 in 2014.

More detailed information for the arts, entertainment, and recreation sector and the accommodation and food services sector illustrates the importance of these sectors to Nevada and the changes that are happening to them. In 2014, 335,832 or almost 32% of all employees counted in the Quarterly Census of Employment and Wages were employed in these two sectors. That was an increase of 10% from 2001 when the number of employees was 303,974. Nationally, excluding Nevada, the combined employment in these two sectors grew by 23% from 11,580,992 in 2001 to 14,290,724 in 2014. The location quotient for amusements, gambling, and recreation, a more specific subsector, went from 2.14 in 2001 to 1.57 in 2014 and for accommodations it went from 13.67 to 11.44. Food services and drinking places went from 0.95 in 2001 to 1.14 in 2014. This could be due to an increase of non-hotel eating establishments either on onsite or in other locations in Nevada's communities.

**Table 3. Average Annual Pay For 2007 and 2014 for Nevada, Bordering States, and the US**

State	2007	2014	2014 Income in 2007 Dollars	2014 Less 2007 in 2007 Dollars	Percentage Difference
Nevada	\$42,149	\$44,727	\$39,174	-\$2,975	-7%
Arizona	\$41,551	\$46,919	\$41,093	-\$458	-1%
California	\$50,538	\$59,042	\$51,711	\$1,173	2%
Idaho	\$33,544	\$37,982	\$33,266	-\$278	-1%
Oregon	\$39,569	\$46,529	\$40,752	\$1,183	3%
Utah	\$37,054	\$42,942	\$37,610	\$556	2%
<b>US Total</b>	<b>\$44,458</b>	<b>\$51,364</b>	<b>\$44,986</b>	<b>\$528</b>	<b>1%</b>

**Quarterly Census of Employment and Wages, Total All Industries**

In terms of wage growth, there have been gains in Nevada's nominal annual average pay. In terms of constant dollars, Arizona, Idaho, and Nevada have seen loses in wages, with Nevada losing the most from 2007 to 2014. While Nevada's economy has been diversifying as shown in Table 2 location quotient analysis, it has not yet fully regained all the jobs lost since 2007. Even so, migration has been picking up in recent years for Clark and Washoe Counties. This has possibly been due to the diversification that has gone on such as in health care, educational services, and the management sectors. This may have acted as a pull factor for migration while average wages have decreased. The following table shows the Census Bureau's estimates of the components of how Nevada's population has changed since 2007.

Table 4 shows the estimates from the Census Bureau for Nevada, Clark and Washoe Counties, and the Balance of the State. It was estimated that there was net domestic out-migration in 2009 through 2011 for the state. There continued to be net international migration estimated during this time frame. Net international migration is made up of four components: Net international migration of the foreign born; Net migration between the United States and Puerto Rico; Net migration of natives to and from the United States; and Net movement of the Armed Forces population between the United States and overseas (<http://www.census.gov/popest/about/terms.html>). The estimate for the net migration of the foreign born is estimated from data from the American Community Survey.

**Table 4. Estimates of Nevada's Components of Population Change 2007 to 2014**

	Year	Natural Increase	Births	Deaths	Domestic Migration	International Migration
<b>Nevada</b>	<b>2007</b>	21,735	40,584	18,849	40,821	11,030
	<b>2008</b>	21,822	40,622	18,800	15,325	10,578
	<b>2009</b>	20,345	39,774	19,429	-3,425	9,390
	<b>2010</b>	19,698	39,605	19,907	-12,960	9,399
	<b>2011</b>	15,637	35,843	20,206	-7,665	7,446

**Table 4. Estimates of Nevada's Components of Population Change 2007 to 2014**

	Year	Natural Increase	Births	Deaths	Domestic Migration	International Migration
	2012	14,296	34,706	20,410	14,463	7,830
	2013	13,820	35,075	21,255	13,188	8,410
	2014	13,451	35,153	21,702	23,623	8,456
Balance of State	2007	1,095	4,146	3,051	4,029	586
	2008	1,149	4,200	3,051	-166	569
	2009	871	3,895	3,024	-855	507
	2010	785	3,777	2,992	-1,379	518
	2011	388	3,599	3,211	-2,305	203
	2012	150	3,401	3,251	544	279
	2013	348	3,507	3,159	260	283
	2014	424	3,635	3,211	3	279
Clark	2007	17,464	30,193	12,729	33,485	8,905
	2008	17,704	30,361	12,657	14,111	8,569
	2009	16,810	29,969	13,159	-1,171	7,625
	2010	16,213	29,785	13,572	-12,079	7,643
	2011	13,261	26,875	13,614	-5,499	6,546
	2012	12,306	26,101	13,795	12,258	6,848
	2013	11,583	26,181	14,598	10,886	7,344
	2014	11,215	26,178	14,963	20,261	7,381
Washoe	2007	3,176	6,245	3,069	3,307	1,539
	2008	2,969	6,061	3,092	1,380	1,440
	2009	2,664	5,910	3,246	-1,399	1,258
	2010	2,700	6,043	3,343	498	1,238
	2011	1,988	5,369	3,381	139	697
	2012	1,840	5,204	3,364	1,661	703
	2013	1,889	5,387	3,498	2,042	783
	2014	1,812	5,340	3,528	3,359	796

**Source: Census Bureau Population Estimates Program: Annual Resident Population Estimates, Estimated Components of Resident Population Change, and Rates of the Components of Resident Population Change for States and Counties: April 1, 2000 to July 1, 2010 and County Totals Dataset: Population, Population Change and Estimated Components of Population Change: April 1, 2010 to July 1, 2014**

Even while Nevada was losing jobs from 2007 to 2010, it was still growing through natural increase and net international migration. With sustained job growth, Nevada may see more people living in the State and returning to the labor force and less migration. However, both for the state and nation the long term projection is for a lower level of labor for participation.

What follows is the current report that contains a summary table for the projections as well as a discussion of general differences between the 2014 and 2015 population projections.

### **The Context of the 2015 Annual Population Projections**

Beginning in 2011, the State Demographer and the Department of Taxation were required to produce annual population projections by October 1 for a 20 year time frame by county. The current projections were prepared with the 1.7 version of the REMI model which contained historic data from 1990 through 2013. The growth rates from that model are applied to the 2014 Certified Population Estimates to produce the population projections. Projections are attached at the end of this document. For the most part, this document reports information at the state level for discussing changes to the model. The individual county projections are provided for your review and comment. There are two sets of tables presented beginning on Page 16 , one representing a baseline forecast without Tesla and Switch locating to Northwestern Nevada and one including their impact. The REMI model looks at the relationship across all of the counties so the impacts from Tesla ripple through not just Northwestern Nevada but the rest of the state as well as commuting and trade-flows are included in the model.

Over time, as these projections have been produced Nevada and the nation as a whole continue to recover from the housing bubble, the spike in energy prices, and the financial crisis. As such each year's projections will vary as economic and demographic relationship continue to change over time. Table 5 shows the projections for 2030 for the four previous annual projections and the current ones. The 2011 projection did not include information from the 2010 Census in the 2010 estimate. If it did, the projection would have been 3,340,507 or 23,196 fewer people for 2030. As more information becomes available and the dynamics of the nation and our local communities change, Nevada continues to see growth for the state as a whole but at a lower level. This varies by county.

**Table 5. Comparing Nevada's Annual Population Projections for 2030**

Year Projection Released	Projection for 2030
2011	3,363,704
2012	3,338,269
2013	3,222,107
2014	3,251,664
2015	3,236,054

As shown above, in comparing 2030, a year all the projections share in common, there are differences between each set of projections. Table 6 looks at 2033 as the year that both the 2014 Final Projections and the 2015 Projections have in common to provide information about the differences by county. Additional information further elaborates on the differences between the two versions going out to 2034 for statewide totals. Those tables and discussion about them are after Table 6 and the discussion that accompanies it.

As stated, Table 6 compares the 2014 projection and the 2015 projection for 2033, the last year they have in common. Statewide, both show growth over the next 20 years. The 2014 projection showed an increase of 528,107 and the 2015 projection shows an increase of 468,768 by 2033.

**Table 6. Comparison of Projections for 2033 from the final 2014 Issued Projections and the final 2015 Issued Projections**

	2013 Estimate	2014 Projection for 2033	2014 Projection for 2033 Less 2013 Estimate	2015 Projection for 2033	2015 Projection for 2033 Less 2013 Estimate	Difference 2015 Projection Less 2014 Projection For 2033
Carson City	54,668	69,965	15,297	59,302	4,634	-10,663
Churchill	25,322	31,563	6,241	31,470	6,148	-93
Clark	2,031,723	2,360,102	328,379	2,396,258	364,535	36,156
Douglas	48,478	49,717	1,239	50,558	2,080	841
Elko	53,384	57,689	4,305	53,983	599	-3,706
Esmeralda	858	870	12	743	-115	-127
Eureka	2,024	2,807	783	2,376	352	-431
Humboldt	17,457	18,184	727	15,228	-2,229	-2,956
Lander	6,343	5,897	-446	5,549	-794	-348
Lincoln	5,020	5,286	266	4,517	-503	-769
Lyon	52,960	73,415	20,455	62,959	9,999	-10,456
Mineral	4,662	4,656	-6	5,750	1,088	1,094
Nye	44,749	48,879	4,130	45,620	871	-3,259

<b>Table 6. Comparison of Projections for 2033 from the final 2014 Issued Projections and the final 2015 Issued Projections</b>						
	<b>2013 Estimate</b>	<b>2014 Projection for 2033</b>	<b>2014 Projection for 2033 Less 2013 Estimate</b>	<b>2015 Projection for 2033</b>	<b>2015 Projection for 2033 Less 2013 Estimate</b>	<b>Difference 2015 Projection Less 2014 Projection For 2033</b>
<b>Pershing</b>	6,882	7,377	495	7,421	539	44
<b>Storey</b>	4,017	4,819	802	5,012	995	193
<b>Washoe</b>	432,324	579,747	147,423	515,176	82,852	-64,571
<b>White Pine</b>	10,095	8,103	-1,992	7,810	-2,285	-293
<b>State Total</b>	2,800,967	3,329,074	528,107	3,269,735	468,768	-59,339

Statewide, the projections are 59,339 or 1.8% fewer people than last year's projections. Part of this is because there are two additional years of economic history in the 1.7 REMI model, going to 2013 instead of 2011 compared to the 1.5 version that was used for the 2014 projections. There was a substantial revision of the Bureau of Economic Analysis (BEA) data as well as a new national forecast of population from the Census Bureau included in the 1.7 version of the model as discussed below. The historic BEA data was revised downward and the Census Bureau's national projection was slightly lowered.

The user can update REMI to reflect local information. The assumptions that were included allowed for Tesla and Switch in Northern Nevada as well as assuming that mining employment does not fall below its historic average employment for 1990 through 2013. Mining employment was increased by 280 in Elko County to include the Lone Canyon Mine for 2017 through 2025. The Nevada Copper Mine in Lyon County was not included at this time because of additional financing not yet being secured (See Federal Land Conveyance Complete at Nevada Copper's Pumpkin Hollow Project [www.marketwatch.com](http://www.marketwatch.com). Accessed 8/31/2015.). Hotel growth in Clark County was assumed to grow at 0.5% beyond the projects currently under construction (See the Construction Bulletin Report at <http://www.lvcva.com/stats-and-facts/visitor-statistics/>.)

### **The REMI model and changes to it**

The REMI model which underlies these projections comes with an "out of the box" (OOB) projection for both the nation as a whole and the 17 counties in Nevada. Adjustments are made to the model to produce the projections and the growth rates from those projections are applied to the most recent population estimates for Nevada's counties. The user can adjust the national as well as the set of local projections. Table 7 compares the national out of the box models for the 2014 and the 2015 projections.

The OOB projections have substantial differences between the national forecasts in the 1.7 model and the 1.5 version. The 1.5 model was used for the 2014 projections. Table 7 shows there are several key differences between the 1.5 and 1.7 models:

- The 1.7 model's forecast has lower job growth as its middle forecast;
- The GDP forecast is not out of line with the recent August 2015 forecast by the Congressional Budget Office;
- Manufacturing employment is not only lower in the 1.7 model but the loss of manufacturing jobs since 2001 is greater than in the 1.5 model;
- There is less labor force participation;
- Given the jobs to labor force ratio, it looks like fewer people are working multiple jobs; and
- An older population is projected compared to the 2014 1.5 version of the model.

All of this creates a scenario that is not only showing less growth over the time frame but also decreases the likelihood of migration as an older population tends to be less mobile.

The following set of related tables, 8A to 8C, show the national forecasts, the state forecasts, and the Nevada share of the national forecasts as a way of summarizing the impact of the data revisions on our projected growth.

Table 8A shows the national projection scenarios used in the 2014 and 2015 projections after updates were made to include changes in national employment for 2011 to 2014 (Version 1.5) and 2013 to 2015 (Version 1.7). Both historic rates of changes as well as recent history are lower in the current 1.7 model. For 2010 to 2014, the annual average was 1.5% in the 1.5 (2014) model compared to 1.8% in the 1.7 model. Also, in the later years the average growth rate for the five year intervals between 2014 and 2034 is lower, 2.0% compared to 4.2%.

Table 8B shows the historic data for 2001 to 2014 for Nevada and the rates of change for employment. Not only was the

loss of employment in 2009 and 2010 deeper in the revised data from BEA, the recovery was slower in 2012 than was estimated in the 2015 projections. That estimation was done by reviewing the Quarterly Census of Employment and Wages data for 2013 and 2014 and updating the BEA data to reflect the changes at that time. As with the national forecast, Nevada is projected to grow more slowly from 2014 to 2034, at 2.1% rather than 5.1% per five year period. The 1.9% growth rate in the 1.7 Model for the period from 2010 to 2014 and the projected 2.1% growth rate are similar to the national economy's historic and projected performance.

Part of the slower growth nationally and a loss of jobs in Nevada are national trends in a number of industrial groups, most notably a loss in retail employment during the 2024 to 2029 period.

Table 8C completes the comparison of the Nevada and National Projections by looking at the state's share of national population and employment. While both projections are similar for Nevada's share of population and employment in the later year's, Nevada is projected to have a smaller share of the nation's employment but there is not much difference in the share of the national population.

**Table 8C. Nevada's Share of the National Historic and Forecasted Population and Employment**

Table 9 looks at manufacturing in the Reno-Carson City-Fernley Combined Statistical Area. There are two ways for the user to adjust the REMI model. One is to update the model with more recent information that becomes available when a newer version is released. This is referred to as updating the model and can be done at the national and local level. At the national level, more recent data may be available through the Current Employment Statistics data than is available at the local level through the Quarterly Census of Employment and Wages data. The national update is done separately and provides information about what the economy would look like if there was no new local information. With either data set, the user adjusts the model to reflect known historic information. The other way to adjust the model is to insert known information about the future. For the current projections that means inserting information on Tesla and Switch. In both the 1.5 and 1.7 models, manufacturing jobs are lost; this is reflecting the national trend of economic gains being made by technology that increases worker productivity.

The current (1.7) projections show a greater loss in manufacturing over time with both the national and local employment updates in comparison to the 1.5 model's projections. However, while the loss is greater, the impact of Tesla both for increasing manufacturing jobs in the region through agglomeration as well increasing worker productivity is greater than what was projected in last year's projection.

Finally, Table 10 compares the 2015 (model version 1.7) projection to the final 2014 (model version 1.5) Nevada projection for the same key indicators that were reported for the national scenario in Table 2. For Nevada, the key differences between the 1.7 and 1.5 models:

- As with the national forecast, the 1.7 model's forecast has lower job growth;
- Unlike the national forecast, manufacturing employment is lower in the 1.7 model but contrary to the national forecast, manufacturing is flat instead of showing a loss over time;
- As with the national forecast there is less labor force participation;
- Given the jobs to labor force ratio, it looks like fewer people are working multiple jobs; and
- The population is slightly smaller but older compared to the 2014 1.5 version of the model.

### Changes in the Carson City, Lyon, and Washoe Counties Projections

In last year's (2014) projections, Carson City, Lyon, and Washoe Counties were projected to grow by 183,175, and in the current projections they are expected to grow by 97,485 or 13.5% from 2013 to 2033. In both projections, there is inclusion of Tesla's impact and in 2015 the impact of Switch as well. The following is an examination of what is leading to that difference between the two projections both in terms of population as well as for employment. The overall job impact for the Reno-Carson City-Fernley Combined Statistical Area was projected to be 13,640 with the 2014 modeling work and for the 2015 model it is 26,121.

Table 11 shows how nationally total employment is expected to either decrease or not grow as much as was projected in the 2014 projections. Manufacturing job growth is less robust nationally and in the OOB forecast this reduced Nevada's manufacturing sector as well. However, with as shown in Table 9 shows how locally with manufacturing the region is projected to be counter to the projected national trend in manufacturing. What is important is that this applies to employment and not labor productivity or total economic output at the national level.

While the national job growth is assumed to be less robust over the next 20 years that looks also to be the case for Carson City, Lyon, and Washoe Counties. Nationally there were slightly more jobs for the period between 2011 and 2013 (the additional history in the model). In the 2014 projections, employment was overestimated and projected for 2012 to 2014 compared to more current information shows as the actual amounts used in the 2015 projections. This less robust performance compared to the national economy also slows overall job growth in the model for the region. Thus, Tesla and Switch would have a larger impact given the recent historic data.

Table 13 and Table 14 look at the three counties and their location quotients from both the 2014 and the 2015 model for 2013 and for 2034. While there are differences between the two projections for the base year of 2013 and the projection of 2014, they are not significantly large differences and the overall structure of the local economies look very similar between the two models.

Table 14 shows that the biggest difference that is likely impacting population growth in the labor force participation rate. The table shows the labor force participation rates for both the 2014 and 2015 projections including Tesla and Switch. What is shown is the difference between the two models and not the impact of Tesla on labor force participation. Labor

force participation is projected to be slightly less nationally but even at a 1.3% difference it shrinks the pool of potential migrants who might move to Nevada. The labor force population is projected to be 294,070,632 in 2034 and 1.3% of that is 3,528,848 fewer people participating in the labor market and looking for work in their community or elsewhere.

**Table 14. Comparing Labor Force Participation Rates Between 1.5 (2014) and 1.7 (2015) REMI Models Labor Force Estimates (2000 to 2013) and Projections for the US and NW Nevada**

In modeling economic migrants, REMI uses as one factor the concept of real relative compensation rates. That is an indicator that looks at the average compensation by industry and the cost of living in a region relative to the nation as a whole. Cost of living includes taxes and housing costs relative to the nation. Table 15 compares the Relative Compensation Rates between the two projections. The rate is less in the 2015 projection and this is tied to more current information for both 2012 and 2013 as well as revisions for 2011 and 2010. The relative advantage of three counties decreased in the 2015 projections compared to the 2014 projections.

**Table 15. Comparing Real Relative Compensation Rates Between 1.5 (2014) and 1.7 (2015) REMI Models Labor Force Estimates (2000 to 2013) and Projections for the US and NW Nevada**

Table 16 shows the projected annual average wage for the three counties as well as Storey County, the United States, and Nevada. Tesla and Switch are locating to Storey County and wage information is reported by where it is earned. While there has been some discussion of housing being developed in Storey County, any plans are still uncertain. So the assumption is that workers are likely to commute primarily from Lyon and Washoe Counties.

**Table 16. Projected Average Annual Wage Rate For the US, Nevada, and Carson City, Lyon and Washoe Counties in Current Dollars**

Table 17 shows the change in relative housing price and changes in the wage rates in comparing the baseline forecast for 2015 to the impact of Tesla and Switch. Relative housing prices go up while wages within the counties are either flat or slightly lower once Tesla is considered. While housing prices may be lower relative to the nation, they do increase and this may impact the attractiveness of the area given average wages.

**Table 17. Percentage Change in Relative Housing Price and Wages for Carson City, Lyon and Washoe Counties Between the Baseline Forecast and the Tesla Impact**

	Carson City		Lyon		Washoe

While wages for the three counties are projected to be lower than national wage rates per capita income is projected to increase over time as shown in Table 18. This may be due to commuting income from Storey County employment, pensions and other sources of income in addition to wages earned within the three counties.

	<b>US</b>	<b>Carson City (Independent City)</b>	<b>Lyon County</b>	<b>Washoe County</b>

In conclusion, while the population projection is less robust for Carson City, Lyon, and Washoe Counties in the 2015 projections compared to the 2014 projections, there do appear to be factors in the model that would explain that, given the projected job growth. As stated above, these projections are done annually using the best information available at that time. As more information becomes available and circumstances change so too shall the projections.

The following pages contain the detailed total population projections and the appendices provide additional information.

**2015 Population Projections for Nevada's Counties 2015 to 2034

Appendix Table 8 - Overall Labor Force Participation Rates From the Baseline REMI Projection and Overall Rates for Selected Counties Impacted by Tesla

The labor force participation rate is defined as the percentage of the labor force population (the noninstitutional population over the age of 16) either employed or unemployed and actively seeking employment.

<b>Labor Force Participation Rates From Baseline REMI Projections For 2015 through 2034</b>	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027
